

# Table of Contents

## INTRODUCTION

### 1. THE AIR

- The makeup of the air • Air Density • The Standard Atmosphere
- Measuring Pressure and Altitude • Definitions of Altitude • Dynamic Pressure and the Bernoulli/Euler Equation • Airspeed Measurement • Lift • Summary and Practical Suggestions • Appendix

### 2. THE NORMALLY ASPIRATED ENGINE

- Determining Engine Power Output • Manifold Pressure and Power • RPM and Power • Induction Air Temperature and Power • Altitude and Power • Reading the Power Charts • Humidity and Power • Mixture • Detonation and Preignition • RPM and MP Limits • Shock Cooling • Measures of Efficiency • Summary and Practical Suggestions

### 3. TURBOCHARGING

- How the Turbo Works • Controlling the Turbocharged Engine • Intercoolers • Emergency Procedures • Summary and Practical Suggestions

### 4. MIXTURE

- Mixture Management • Considerations for Running Lean of Peak • Spotting Engine Problems with EGT • Summary and Practical Suggestions

### 5. TURBINE ENGINES

- The Layout of the PT6A • Engine Controls • Engine Instruments • Engine Start and Normal Operations • Summary and Practical Suggestions

### 6. THE PROPELLER

- Propeller Efficiency • Advance Ratio • Variable Pitch Propellers
- Propeller Efficiency Maps • Thrust Horsepower Available Curves

• Constant Speed Propellers • Propeller Overspeed • Summary and Practical Suggestions

7. DRAG

Why the "U" Shape for Drag? • Parasite Drag • Induced Drag • Total Drag • using THPr Curves • Summary and Practical Suggestions

8. PERFORMANCE, PART I: TAKEOFF AND CLIMB

Normal Takeoff • Soft Field Takeoff • Short Field Takeoff • Obstacles • Climb • Cruise Climb • Summary and Practical Suggestions

9. PERFORMANCE, PART II: CRUISE AND LANDING

Cruising for Maximum MPG • Rules of Thumb for Maximum Range • Landing Performance • Balked Landing • Summary and Practical Suggestions • Appendix: The Pure Theory of Maximum Range

10. INSTRUMENT FLYING BY THE NUMBERS

Flying a Trip • Partial Panel • Summary and Practical Suggestions

11. LIMITATIONS: AIRSPEED AND G-LOAD FACTOR

"G" Loads • Limit and Ultimate Loads • The Maneuvering Speed • Airspeed Limitations • Gust Loads • The Combined Maneuver-  
G u s t

Envelope • Summary and Practical Suggestions

12. STRENGTH, STABILITY, AND CONTROL

Weight • CG Limits • Longitudinal Stability • Control • Stick Force versus Velocity • Stick Force versus G • Complications • Summary Diagram • Summary and Practical Suggestions

13. WRITING YOUR OWN WEIGHT AND BALANCE PROGRAMS

Spreadsheet • Basic • Complications • Summary and Practical Suggestions

14. MULTIENGINE AERODYNAMICS

Engine-out Climb Performance • Zero Sideslip • Attaining Zero Sideslip • Vmca • Single Engine Stalls • Summary and Practical Suggestions

15. MULTIENGINE OPERATIONS

Takeoff Planning • The Takeoff • The Initial Climb • Cruise and Cruise Climb • Instrument Approaches and Traffic Patterns • Landing with One Engine • Single Engine Go-Around V • Summary and Practical Suggestions

16. ENGINE FAILURE IN SINGLE ENGINE AIRPLANES

Engine Failure on Takeoff • Summary and Practical Suggestions  
• Appendix

17. PRESSURIZATION

Typical Pressurization Layout • Controlling Cabin Altitude • Emergency Procedures • Summary and Practical Suggestions

18. AUTOPILOTS AND FLIGHT DIRECTORS

Sensors • Pilot Inputs • Display Output • Servos • Preflight • Limitations • Normal Operations • Emergencies • Summary and Practical Suggestions

19. STORM AVOIDANCE HARDWARE

Radar • Stabilization • Resolution • Tilt Management • Attenuation and Radar Shadow • Gain • Looking at the Ground • Stormscopes and Strikefinders • Summary and Practical Suggestions

20. ICING

What Does Ice Do to the Airplane? • Where are You Likely to Find Ice? • Should You Launch into Forecast Ice? • What Should You Do When You Start to Pick Up Ice? • To Be Legal in Ice • Summary and Practical Suggestions
